Abstract:

COVID-19 has changed the lifestyle of human being tremendously throughout the globe. This pandemic situation caused the continuous spread of new strains of COVID-19 and created a heavy economic burden on each country. In India, COVID-19 was started in April 2019 and converted into three different pandemic waves.

In this perspective, we have focused on the vaccines such as Covaxin, Sputnik, Covishield available in India to vaccinate the citizens. Currently, India is in the state of processing, manufacturing vaccines with the free vaccination strategies against COVID-19, and the Indian government is encouraging all the populations to be immunized, being the world's largest immunisation campaign. In addition, India has implemented a simple digital system platform for dealing with and tracking all aspects of vaccine development. The current preventive approach to defeat the COVID-19 is to increase the rate of Vaccination, which can be an important weapon to defeat the different virus stains and arrest future spared of COVID-19. The outcomes of this perspective will help all for key planning of such pandemic situation in future.

Keywords: COVID-19, Covaxin, Sputnik, Covishield, Vaccination.
