ABSTRACT:

Type 2 diabetes mellitus (T2DM) is a chronic metabolic disorder affecting millions of people worldwide. It is increasingly recognized that T2DM patients are at higher risk of developing comorbid depression, which can lead to adverse health outcomes. This study aims to provide a comprehensive assessment of the prevalence of depression in type 2 diabetes mellitus patients through a survey-based cross-sectional study.

OBJECTIVE: To determine the prevalence of depression in type 2 diabetes mellitus patients.

DESIGN: Cross-sectional study

KEYWORDS: Depression, Type 2 Diabetes mellitus, Hamilton Depression Scale.
