TELEPHARMACY IN HEALTH CARE SYSTEM

Hrishikesh Sanjay Sonsale, Pune

Email Id: serviceheb@gmail.com

Abstract

The term indicates that pharmaceutical care. Pharmacists and patients are not the same places, but they interact with information and communication technology. Telepharmacy services are provided several hospitals. Using the private network, pharmacists directly accessed the hospital server and information system to conduct their network. Telepharmacy provides pharmaceutical services to underserved or rural areas. The use of new technology such as Telemedicine. Telepharmacy can help to solve the problems. Telepharmacy is successfully implemented within the community pharmacy setting through the creation of a remote dispensing site. The trend in telemedicine shows that telepharmaceutical care is likely to continue to expand and allows for a better allocation of resources and access to more patients. This paper has reviewed the multifaceted phenomenon, such as some are applications, some are advantages, disadvantages are discussed.
