### Abstract:

In the present study the medicinal plant Gentian Lutea L. having an anti-inflammatory potential were selected to be formulated as herbal gel. Various qualitative tests were performed on the extract for preliminary phytochemical screening. The gels were prepared using the dried methanolic extract of Gentian L. Herbal gel formulations were evaluated for its pH, appearance and homogeneity, viscosity, spreadability studies.

### Keywords:

Gentian Lutea, Anti-inflammatory, Phytochemical screening
