### Abstract:

This study was performed to clinical outcomes and factors associated with patency of self-expanding in patients with malignant large intestine, gastrointestinal obstruction. Introduction of more hygienic environment with the domestic refrigeration & the widespread use of antibiotic .the developing word has seen similar patterns as these countries adopt an increasing westernised lifestyle. In the past the incidence of ulcerative colitis is stable at 10-20 per 100,000 with a prevalence of 100-200 per 100,000, while the incidence of Crohn's or acute disease is increasing and is now 5-10 per 100,000 with a prevalence of 5-100 per 100,000. Both diseases most commonly start in the second and third decades of life with a second smaller incidence peak in the seventh decade. Approximately 240 000 people are affected by IBD, Intestine bowel obstruction. Although many patients require surgical and admission to hospital for other reasons, with substantial associated morbidity, the majority have an excellent work record and pursue a normal life.
