### Abstract

Drugs play an important role in dental treatment by improving the response of the patient in both pre-treatment and post-treatment phases. Drugs in dentistry act as a primary treatment modality as well as facilitators of dental procedures. Dental pain presents one of the most common causes of patients seeking emergency treatment in the dental office. This article is to give a broad review of the pharmacological agents which can be used to treat and provide relief from the sign & symptoms from the diseased condition. Drugs are needed to be studied for their effects on the various systems in the body their interaction with the body, their excretion from the body.

**Keywords:** *Pharmacological agents, Dentistry, Drugs, Dental Pain, Oral infections.*
